

MANJOT SINGH

manjot1104@gmail.com — 9869049090

SKILLS

C++, JavaScript, PHP, Data Structures & Algorithms, Object-Oriented Programming (OOP), HTML5, CSS3, JavaScript (ES6+), React.js, React Native, Redux, Tailwind CSS, Responsive Design, Node.js, Express.js, REST APIs, Authentication & Authorization, Session Management, MongoDB, MySQL, MongoDB Atlas, Git, GitHub, Render, VS Code, Postman, NPM, API Integration, Debugging, Agile Development, Problem Solving

EDUCATION

BTech CSE — GTBIT — 2024

Bachelor of Technology in Computer Science Engineering

EXPERIENCE

Final Year Undergraduate — Software Engineering

Delhi, India — 2024

- Designed and developed multiple full-stack web applications using modern JavaScript technologies, implementing responsive user interfaces with React.js and Node.js backend services
- Implemented RESTful APIs and backend services using Node.js and Express.js, creating scalable server-side applications with proper authentication and authorization mechanisms
- Built responsive user interfaces using HTML, CSS, and JavaScript frameworks, ensuring cross-browser compatibility and mobile-first responsive design principles
- Integrated MongoDB databases for efficient data storage and management, optimizing queries and implementing proper data modeling for application scalability
- Followed Agile development practices including version control using Git and GitHub, collaborating with team members through code reviews and continuous integration workflows
- Debugged and optimized application performance for better user experience, identifying bottlenecks and implementing performance improvements across frontend and backend systems
- Collaborated with peers to design scalable and maintainable application architectures, participating in technical discussions and contributing to system design decisions

PROJECTS

Stay Nest — Travel Booking Web App

- Developed a full-stack travel booking platform allowing users to browse and book travel listings, implementing comprehensive search functionality and booking management systems
- Implemented secure user authentication and authorization using session-based login, ensuring data protection and user privacy through proper security measures
- Designed RESTful APIs for managing listings, reviews, and user data, creating efficient endpoints for CRUD operations and data retrieval

- Integrated MongoDB Atlas for scalable cloud database management, implementing database optimization and backup strategies for production environments
- Built dynamic server-side rendered pages using EJS templates and Bootstrap, creating a seamless user experience with server-side rendering capabilities
- Implemented CRUD operations for travel listings and user reviews, developing comprehensive data management features with proper validation and error handling
- Deployed the application on Render for public access, configuring production environment and implementing continuous deployment workflows

Stone Paper Scissors Game

- Developed an interactive browser-based game using vanilla JavaScript, implementing game logic and creating an engaging user experience
- Implemented game logic for player vs computer gameplay, developing algorithms for random computer moves and win condition detection
- Designed responsive UI with animations and score tracking, creating visual feedback and smooth transitions for enhanced user engagement
- Handled DOM manipulation and event handling for smooth gameplay, implementing efficient event listeners and state management
- Improved user engagement through dynamic feedback and visual effects, adding animations and interactive elements to enhance the gaming experience

To-Do List Application

- Built a task management application allowing users to add, delete, and complete tasks, implementing comprehensive task management features
- Implemented local storage to save tasks persistently in the browser, ensuring data persistence across browser sessions
- Designed responsive UI using modern CSS layout techniques, creating a clean and intuitive interface for task management
- Added real-time task updates and dynamic DOM rendering, implementing efficient DOM manipulation for smooth user interactions

- Deployed the project using GitHub Pages, configuring static site hosting and implementing proper build processes
